/note—"Organ: pooled brain, lung, testis; Vector:

pcMv-SPORT6; Site_1: Not1; Site_2: EcoRv (destroyed); RNA
source annonymous pool of 6 male brains, age for 10 male lung, age 27; and 1 male testis, age 69. Library is
oligo-dT primed and directionally cloned (EcoRv Site is
destroyed upon cloning). Average insert size 1:8 kb,
insert size range 1-3 kb. Library is normalized and
enriched for full-length clones and was constructed by C.

/note—"Organ: pooled lung and spleen; vector: pcWv-SPORT6; Site_1: Not1; Site_2: EcoRv (destroyed); RNA source anonymous pool of 4 week female lung, 16 week female spleen, and 20-22 week male spleens. Library is oligo-dr primed and directionally cloned (EcoRv site is destroyed upon cloning). Average insert size 1.4 kb, insert size range 1.3 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 026. Note: this is a NILMGC Library."

g
fractionation; average insert size 1.08 kb. Library was amplified once on solid support and plasmid DNA from library was prepared. The library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806; 0.5 microgram single-stranded library plasmid DNA was mixed with 5 micrograms POR product representing library inserts and hybridized to an Ecot of 20. Single-stranded (unhybridized) plasmids were isolated by hydroxyapatite chromatography and used to make this
                                                                                                                                                                                                                                                            ;

The sequence contained an oligo-dr track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. cDNA Library Preparation: M.B. Soares Lab Clone distribution:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-084 451-883-2

Sequence 2, Application US/08451883

Sequence 2, Application US/08451883

Patent No. 5798209

GENERAL INFORMATION:

APPLICANT: Lawrence C.B. Chan

TITLE OF INVENTION: HUMAN AND MOUSE VERY LOW DENSITY

TITLE OF INVENTION: LIPOPROTEIN RECEPTORS

TITLE OF INVENTION: USE OF SUCH RECEPTORS

NUMBER OF SEQUENCES: 4

NUMBER OF SEQUENCES: 4

ADDRESSEE: LYON & LYON

STREET: 633 West Fifth Street, Suite 4700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB 1; Length 3116; 6.2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Indels

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention relates to a method for screening biologically active agent that modulates cancer associated protein kinase function. The invention also relates to a method for diagnosing cancer comprising determining the upregulation of expression of a nucleic acid sequence encoding a protein kinase. The method is useful for diagnosing cancer. A protein kinase is useful for accening biological agents that modulate cancer associated protein kinase function. Downregulating the activity of protein kinase is useful for inhibiting the growth of a cancer cell, e.g. liver or colon useful for inhibiting the growth of a cancer cell, e.g. liver or colon derived tumours and inflammatory samples such as arthritic synovium, for amplified DNA in the cell or increased expression of corresponding mRNA or protein and is also useful to detect differences in expression levels such as molecular weight, amino acid and nuclectide sequences between the located or characterial contracted or characterial contracted or colon corresponding mRNA or protein and is also useful to detect differences in expression levels on the colon characterial contracted or colon and is also useful to detect differences in expression levels and contracted or characterial contracted or colon and is also useful to detect differences in expression levels and contacted or colon and is also useful to detect differences in expression levels to colon and a molecular weight, amino acid and nuclectide sequences between the color or colon and an activity of the colon and an activity and colon and and nuclectide sequences between the color of colons and colo expression ulation of Diagnosing cancer, comprises determining the upregulation of expressiof a nucleic acid sequence encoding a protein kinase or upregulation expression of the protein kinase, in the cancer Claim 16; Page 62-64; 87pp; English. The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzhalmer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinhibin activity, chemotactic/chemokinetic activity, heemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and

                                                                                                                The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system incuropathy and localised neuropathies and central nervous system glassass, such as Alzhelmer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and constitution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1043

the invention relates to polynuclectides (I) encoding diagnostic and theraperic (DTTHP) polypeptides (II), which include e.g. enzymes, and proteins involved in growth and development and receptors. (I) and may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate DITHP expression. For example, (I) and expression by rectifying mutations or deletions in a patient's genome, that affect the activity of the DITHPs, by expression patient's genome, that affect the activity of the DITHPs, by expression in a patient's genome, that affect the activity of the DITHPs, by spression of it. and (II) may be used to treat diseases, for example, cell proliferative proteins or supplementing the patient's own production of them. (I) and (II) may be used to produce the DITHPs, by inserting the nucleic acids in elected and quantitate the presence of similar nucleic acids in a host conduce why also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in the complementary sequences may also be used as antigens in the production of the antibodies against DITHPs and in assays to identify modulators of DITHP antibodies and activity. The anti-DITHP antibodies may also be used as antigens in the production of antibodies may also be used as diagnostic agents for detecting the artibodies may also be used as diagnostic agents for detecting the assay (ELISA)). Ansayogy 6 the represent human diagnostic and assays (ELISA)). Ansayogy for the invention. Claim 1; Page 310-311; 522pp; English.

human secreted proteins, and encode the proteins given in AAY1219 to AAY1219, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proliferation/differentiation activity, cell proliferation/differentiation activity, reproductive hormone activity, tissue growth regulating activity, reproductive hormone crivity, tumour inhibition activity or other activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a

The invention relates to novel isolated polypeptides (I), and the invention relates to novel isolated polypeptides (I), and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune confiscions and graft versus host disease, infectious diseases (e.g. rhematois and graft versus host disease, infectious diseases (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and cher blood related disorders (sickle cell anaemia), myeloproliferative disorders, primary haematopoietic disorders, hyperproliferative disorders (e.g. dlancher's disease, Parkinson's disease), chromosomal abnormalities (bown syndrome), ischaemic injury (e.g. stroke), renal abnormalities (bown syndrome), ischaemic injury (e.g. stroke), renal alsorders (e.g. globomerulopephitits), cardiovascular disorders (e.g. disorders (e.g. globomerulopephitits), cardiovascular disorders (e.g. dasorders (e.g. globomerulopephitits), cardiovascular disorders (e.g. disorder (inflammatory disorders), liver disorders (cirhosis), as stimulators of B-cell responsiveness to pathogens, activators of the colliferation in pathologies e.g. acquired immune deficiency syndrome (AlbS). AAS26976-AAS27801 represent novel signal transduction cynthemay protein coding sequences and PCR primers of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1; SEQ ID No 189; 880pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ruben SM;

New isolated nucleic acid encoding a protein for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -

Claim 1; SEQ ID No 387; 837pp; English.

The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. Alzheimer's disease and amplotrophic lateral sclerosis, infections caused by bacteria, viruses amplotrophic lateral sclerosis, infections caused by bacteria, viruses e.g. Acquired inmennodeficiency virus (AIDS) and fungi, ocular disorders e.g. depoparation adaction, qastrointestinal disorders e.g. dysphagia, adenocarcinomas and irritable bowel syndrome, reproductive system disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes and pituitary dwarfism, cancers and disorders at the cellular level e.g. leukaemia, disorders involving neovascularisation e.g. malignancies,

                                                                                                                                                                                                                                                                                                                                                                                                                                              ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to full length GENSET human nucleic acids encoding potentially secreted proteins. The nucleic acids and the polypeptides
respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. acute kidney failure and blood related disorders e.g. myocardial infarction. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotraxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                               120

they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased patients of gene expression by rectifying mutations or deletions in a patient's genome that affect the activity of GENSET or by supplementing the patients own production of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENSET expression. The sense and antisense nucleic acids may also be their expression. The sense and antisense nucleic acids may also be treasned of similar nucleic acid sequences in samples, and hence to determine which patients may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antisense to acids may in the production of antisonists) of GENSET polypeptide expression and activity. The present sequence is a GENSET nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The invention comprises the amino acid and coding sequences of human secretory (SPTM) proteins. The SPTM DNA and amino acid sequences are useful for treating a disease or condition associated with the expression of functional SPTM. The SPTM NAS sequences are useful for somatic or germline gene therapy to correct a genetic deficiency (e.g. severe combined immunodeficiency). The SPTM DNA sequences are also useful in providing protection against intracellular parasites (e.g. fungal parasites and protozoan parasites). The SPTM DNA and protein sequences are also useful for diagnosing cell proliferative disorders, cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immune disorders (e.g. AIDS), neurological disorders (e.g. Parkinson's disease), motor neuron disorders, demyelinating diseases (e.g. multiple sclerosis), meningitis, abscesses, prion diseases, cerebral palsy, neuroskeletal disorders, peripheral nervous system disorders, dermatomyositis and polymyositis, myopathy, mysathenia gravis, and mental disorders (e.g. Tourette's syndrome). cDNA sequences ABL99746 - ABL99229
                                                                                                                                                                                                                                                                                                                                                                                                              Hillman JL;
